

TQ6602

Hybrid Wi-Fi 6 (802.11ax) Wireless Access Point

The Allied Telesis Enterprise-class TQ6602 Hybrid Wireless Access Point features Wi-Fi 6 technology with 4 spatial streams to deliver a raw capacity of 3.550 Gigabits.

Overview

The innovative TQ6602 is the world's first Wi-Fi 6 AP to support multi-channel, single-channel¹ (Channel Blanket) and hybrid operation (the simultaneous use of multi-channel and Channel Blanket). This powerful solution combines maximum performance and seamless roaming to enable the most flexible wireless networks available, and the best possible user experience.

The TQ6602 has one 2.4GHz and one 5GHz Wi-Fi6 (802.11ax) radio, and supports Multi-User Multiple Input and Multiple Output (MU-MIMO), allowing multiple clients to send and receive data at the same time, substantially increasing throughput. A comprehensive feature-set provides a superior solution for Enterprise businesses.

The TQ6602 in standalone mode can be managed using its intuitive web-based interface. For medium and larger installations, Autonomous Wave Control (AWC) provides centralized management, and regularly analyses the wireless network, automatically optimizing AP settings to reduce interference and minimize coverage gaps—all with no user intervention. AWC wireless management is available on our Vista Manager EX network management platform, and from Vista Manager mini running on a number of switch and firewall products.

Flexible deployment options include desktop use, and wall or ceiling mounting. Power can be supplied by Power over Ethernet, or by an optional AC power adapter.

Key Features

Channel Blanket Hybrid Operation

- ▶ The TQ6602 supports operation in multi-channel, single-channel¹ (Channel Blanket) and hybrid (multi-channel and Channel Blanket) modes, for the most flexible wireless solution available.
- ▶ Multi-channel operation provides maximum throughput for high-bandwidth clients, while Channel Blanket operation supports seamless roaming for dynamic environments like warehouses and hospitals, as all APs appear as a single virtual AP.
- ▶ Hybrid mode combines the best of both architectures, enabling an innovative wireless solution that maximizes performance for a superior user experience.
- ▶ The high throughput of Wi-Fi 6 further increases the performance of hybrid networks in large environments with many clients.

Bidirectional MU-MIMO

- ▶ The TQ6602 supports Wi-Fi6 (802.11ax) bidirectional MU-MIMO. Unlike conventional unidirectional MU-MIMO, this feature enables the AP to transmit and receive data simultaneously from multiple clients at once, to lower latency and improve throughput and performance for end-user wireless devices.

Wi-Fi 6

- ▶ IEEE 802.11ax Wi-Fi 6 wireless connectivity delivers performance and throughput that is four times faster than 802.11ac devices. In crowded wireless environments, efficient bandwidth distribution is important. Bi-directional Multi-user MIMO technology simultaneously communicates with multiple clients at once, reducing contention and improving capacity and throughput.

IEEE 802.11e Wireless Multimedia (WMM)

- ▶ Quality of Service (QoS) on the wireless network optimizes the performance of voice, video, and data applications, as each has different latency, bandwidth and performance requirements. QoS traffic prioritization ensures the timely delivery of these services.

IEEE 802.11i (security)

- ▶ This feature set facilitates strong encryption, authentication and key management strategies, guaranteeing data and system security. In addition to Counter Mode with Cipher Block Chaining Message Authentication Code Protocol (CCMP), IEEE 802.1X key distribution via RADIUS controls access to the network.

Virtual APs with Multiple SSIDs

- ▶ The TQ6602 supports Virtual AP (VAP) functionality, with the assignment of different SSIDs and security policies for each VAP on the physical device.
- ▶ VAPs can be mapped to VLANs for logical network separation and improved throughput. Enable communication by application, function or users.

Fast Roaming

- ▶ Fast roaming 802.11k, 802.11v, and 802.11r optimize discovering and selecting the best available AP in a Wi-Fi network. It establishes rapid connectivity for users to seamlessly move between APs, as the APs exchange security keys, so the client device does not need to re-authenticate on the RADIUS server as they roam.

¹ Single-channel (Channel Blanket) operation will be supported in a future firmware release.

Wireless

- ▶ Multi-channel, single-channel, or hybrid operation
- ▶ OFDMA
- ▶ Bi-directional Multi-user MIMO
- ▶ Spatial Reuse
- ▶ Airtime fairness
- ▶ Automatic channel selection
- ▶ Automatic control of transmission power
- ▶ Band Steering
- ▶ Fast roaming
- ▶ RF load balancing
- ▶ Wireless Distribution System (WDS)
- ▶ Wi-Fi Multimedia (WMM) for traffic prioritization

Operational Modes

- ▶ Centrally managed in multi-channel mode by Vista Manager EX (up to 3,000 APs)
- ▶ Centrally managed in single-channel¹ or hybrid mode (multi-channel and single-channel) by Vista Manager EX
- ▶ Centrally managed in multi-channel mode by Vista Manager Network Appliance (VST-APL) (up to 500 APs)
- ▶ Centrally managed in single-channel¹ or hybrid mode (multi-channel and single-channel) by Vista Manager Network Appliance (VST-APL)
- ▶ Centrally managed in multi-channel mode by Vista Manager mini (up to 305 APs)
- ▶ Centrally managed in single-channel¹ or hybrid mode (multi-channel and single-channel) by Vista Manager mini
- ▶ Standalone

Management

- ▶ Graphical User Interface (HTTP/HTTPS)
- ▶ Simple Network Management Protocol (SNMPv1, v2c)
- ▶ Firmware upgrade
- ▶ Backup/restore settings
- ▶ Syslog notification
- ▶ DHCP client
- ▶ NTP client

Security

- ▶ Authentication and accounting
 - IEEE 802.1X authentication and accounting
 - IEEE 802.1X RADIUS support
 - Shared Key Authentication

Media Access

- ▶ CSMA/CA + Ack with RTS/CTS

Diversity

- ▶ Spatial diversity

¹ Single-channel (Channel Blanket) operation will be supported in a future firmware release.

² The TQ6602 complies with the FCC and CE certifications when not using Dynamic Frequency Selection (DFS)

³ Certificated with firmware release 7.0.0-1.3 or later

⁴ Using 256 Quadrature Amplitude Modulation

Wireless Management Licenses

Wireless management of the TQ6602 is available from the Vista Manager EX network management platform, and from Vista Manager mini running on our SwitchBlade x908 GEN2, x950, x930, x550, x530 Series switches or AR-Series firewalls and routers.

⁵ The AWC plug-in requires an AWC license, and a Vista Manager EX base license to operate on Vista Manager EX
⁶ Channel Blanket requires an AWC-CB license, an AWC license, and a Vista Manager EX base licenses to operate on Vista Manager EX
⁷ 5 APs can be managed for free. Purchase one license per 10 additional APs on switches, or one license per 5 additional APs on the AR4050S Firewall
⁸ Channel Blanket is not available as a free service. Both an AWC-CB license and an AWC license are required for Channel Blanket to operate. Purchase one AWC-CB license per 10 APs on switches, or one license to manage 5 APs on the AR4050S Firewall. This feature is supported on TQ5403 and TQ5403e access points (and coming in a later firmware release for the TQ6602 access point)
